Arran Pilot

Arran Pilot is the nation's favourite garden-grown variety. Arran Pilot has been around since 1930 and has remained popular due to its excellent taste and early boiling ability.

Pilot produces high yields of white skinned tubers with shallow eyes. The flesh is pure white and is among the best boilers available.

Great resistance to all forms of scab and scores a high 9 for spraing resistance.

Casablanca

Casablanca are a new white skinned first early with the potential to beat Winston on the showbench.

A clean smooth white with shallow eyes will make it an exhibitors delight and its cooking ability will make it a chefs dream with its ability to chip, bake or boil.

Edible size crops can be achieved in 62 days from planting.

Duke Of York

Duke of York seed potatoes were first entered on the national list back in 1891 and they soon became famous for their great taste and all-round culinary use in the kitchen.

Duke of York potatoes have yellow flesh and are oval in shape.

Once they are boiled the potatoes are dry and mealy, making them an ideal early to boil straight from your garden. Duke of York has good resistance to dry rot.

Dunluce

Dunluce were bred by Jack Clarke back in 1976 who famously bred the Ulster range of potatoes. Since then, Jamieson brothers has been the only grower of the variety and it supplies all other major retailers with Dunluce seed.

Dunluce are round to oval in shape. Eyes are shallow and the skin is white as is the flesh. We would recommend this variety for great crops of early potatoes. Great resistance to all forms of scab and resistance to disintegration when boiling.

Epicure

Epicure seed potatoes are also known as Ayrshires with them being the traditional early potato in that area. Epicure has the ability to recover quickly from a nip of frost and that is why it is so popular in early producing areas.

Epicure produces high yields of floury white fleshed tubers that are round in shape. One of the best tasting first earlies which are now making a comeback by popular demand.

Foremost

When Foremost was first added to the national variety list in 1954 it was called Suttons Foremost. This variety was a instant hit with gardeners who liked its excellent flavour and resistance to disintegration when boiling. With average sized yields and disease resistance this variety never took off commercially. It does have good common scab resistance. Foremost seed potatoes are short to oval in shape with white skin and waxy white flesh. Foremost was awarded the RHS award of garden merit and joins an elite club of varieties.

Home Guard

Home Guard seed potatoes are well known for their early lifting ability. Introduced in 1942 Home Guard was the main potato during the war years and was a commercial success due to its consistent high yields of tasty fresh potatoes.

The disease resistance of Home Guard is very good with high resistance to all forms of scab and spraing. Skin colour is white with white flesh. Short oval tubers with shallow eyes are most common for this variety.

Of Course!

Jersey Royal

International Kidney are more commonly known as Jersey Royals but they can only be called this when they are grown in the magical soil of Jersey which gives them their special taste which they are renowned. Classed as an early maincrop it can also be classed as an early due to the fact it is grown so early on some areas. Introduced in 1879 it is now considered to be a heritage variety that has stood the test of time and taste. Tubers are of a kidney shape with shallow eyes and white flesh and skin.

Red Duke of York

Red Duke of York are a heritage variety from 1942. The first Red Duke was said to be found in a crop of white dukes in Holland. Red skinned tubers with shallow eyes and yellow flesh. Red Dukes are a dry mealy potato packed with flavour and do not disintegrate on boiling. Without doubt this is one of my favourite varieties that we sell and many major supermarkets and retailers are now stocking this potato as the best of the best in the potato world. Winner of the RHS award of garden merit.

Rocket

Rocket seed potatoes when first released in 1987 were the quickest bulking of all early potatoes. Rockets ability to grow large crops of uniform round tubers made it very popular. Considered to be one of the better exhibition potatoes at the time. Tubers are white fleshed and skinned with shallow eyes with a mild taste. There is good resistance to blackleg, common scab and spraing. Lifting of Rocket before full maturity is recommended to avoid tubers cracking.

Sharpes Express

Sharpes Express are one of our heritage seed potatoes. Sharpes were first added to the national potato variety list in 1901 and have been going strong ever since. Sharpes Express tubers are long and oval. A white skinned variety with pale lemon coloured flesh with a high dry matter content makes for a great potato in the kitchen with great all-round use. Sharpes Express has a fine flavour and is suited to boiling-roasting and chipping. Sharpes has good resistance to common scab and tubers have shallow eyes.

Winston

This Jack Dunnett variety has proved to be both a commercial success and an exhibition success all in one. Released in 1992 this white skinned variety has been unstoppable on the showbench circuit winning many titles year after year. Winston produces high yields of smooth shallow eyed tubers that are short to oval in shape. The flesh has a firm texture and a creamy colour. Winston has excellent all round disease resistance. Very low dry matter and would be described as a wet potato.

- ✓ Scab resistant
- ✓ PCN resistant
